

## CLAIMS

It is claimed:

1. A liquid crystal display comprising:

a liquid crystal panel having a first glass substrate and a second glass substrate that has a terminal part that protrudes beyond the first glass substrate;

a backlight provided with a light source, a light guide plate and an optical sheet;

a case that houses said liquid crystal panel and backlight; and

a bonding member that bonds said liquid crystal panel's second glass substrate and said case;

said bonding member being at the periphery of said liquid crystal panel's effective display section, and, at the second glass substrate protrusion portion near the terminal part, being provided within a range from roughly the halfway point of the terminals' length to the effective display section, and being moreover narrower than the frame part of the area where said first and second glass substrates are overlapped.

2. The liquid crystal display according to claim 1, wherein said bonding member is strip-shaped or rim-shaped double-sided tape.

3. A liquid crystal display comprising:

a liquid crystal panel that has a first glass substrate and a second glass substrate that has a terminal part that protrudes beyond the first glass substrate;

a backlight provided with a light source, a light guide plate and an optical sheet;

a case that houses said liquid crystal panel and backlight; and

a bonding member that bonds said liquid crystal panel's second glass substrate and said case;

said bonding member being at the periphery of said liquid crystal panel's effective display section, being provided at the frame part of the area where said first and second glass substrates are overlapped, and being moreover narrower than said frame part.

**4.** The liquid crystal display according to claim 3, wherein said bonding member is strip-shaped or rim-shaped double-sided tape.
